SURFACE MOUNT PERFECT ARCH

- Step 1:** Measure arch width inside dimension.
Step 2: Measure arch height inside dimension.

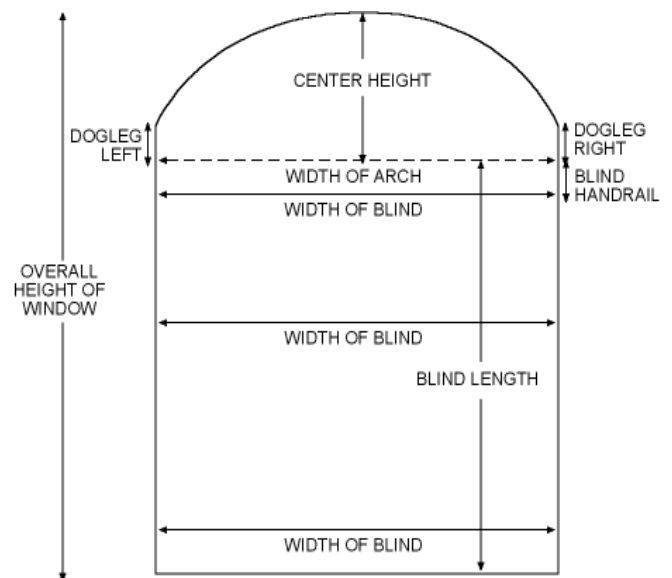

SURFACE MOUNT PERFECT ARCH WITH BLIND BELOW

- Step 1:** Determine arch starting height, starting at the top of the blind head rail.
Step 2: Measure arch WIDTH and arch HEIGHT.
Step 3: Make sure blind length and arch height = TOTAL height of window.

SURFACE MOUNT EXTENDED ARCH WITH BLIND BELOW

- Step 1:** Determine arch starting height, starting at the top of the blind head rail. Blind may follow existing horizontal mullion or be at any designated dogleg height between 5" and 17".
Step 2: Measure blind WIDTH and blind LENGTH.
Step 3: Measure arch WIDTH and arch CENTER HEIGHT.
Step 4: Measure arch DOGLEG LEFT and DOGLEG RIGHT.
Step 5: Make sure blind length and arch height = TOTAL height of window.

REMEMBER: We are always available to answer any question regarding any measurement concern.
