Notice: If Shade Length is 3X More Than Width - Possible Tracking Problem

Roller shades that exceed a 3-to-1 length to width ratio, where the shade is more than 3 times longer than it is wide, may have problems tracking or rolling up straight. This tracking problem, commonly referred to as telescoping, is an inherent characteristic of roller shade fabrics and should be explained to your customer. We make every effort to 'fine tune' each shade, but shades with these dimensions are prone to this problem. **3X LENGTH TELESCOPING SHADES ARE NOT COVERED UNDER WARRANTY.**

Clear Edge Valance with Insert

Using a 3 1/2" Clear Edge valance, a 3 1/2" strip of matching Roller Shade fabric is inserted into the valance channel. This is for use with inside or outside mount roller shades and panel track systems. We can also fabricate the inserts only.

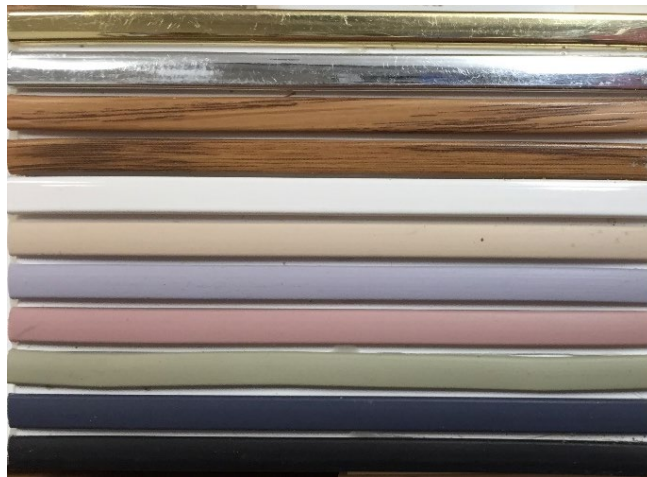

Single & Double Decor Trim

For use with Roller Shades, Roman Shades, or Panel Tracks, these beautiful valances can be made into a single valance or two stacked valances with the choice of any fabric inserts to match any custom shade. Along with fabric insert, the decorative trim is customizable with our selection of ten different colors and patterns.

ROLLER SHADES

Date: _____

To: _____

Sidemark: _____

IMPORTANT NOTICE

The order for the above-referenced Sidemark contains a Roller Shade, or Roller Shades that are three times longer than their width.

Roller Shades that are at least three times longer than their width will tend to walk or telescope when rolled up. This can cause the shade to rub on the mounting brackets and fray. This may also cause the shade to roll up crooked.

This is the nature of the product and will happen regardless of the manufacturer. Telescoping is NOT a Warranty Issue.

Your client may need to guide the shade with their hand as it rolls up. Please inform your client of this situation.

Thank you!
